| This analysis is carried out using procedures adapted from APHA Method 5310 "Total Organic Carbon (TOC)". Dissolved carbon (DOC) fractions are determined by filtering the sample through a 0.45 micron membrane filter prior to analysis. |        |                                        |                                       |
| <b>CARBONS-TOC-VA</b>                                                                                                                                                                                                                      | Water  | Total organic carbon by combustion     | APHA 5310B TOTAL ORGANIC CARBON (TOC) |

## Reference Information

This analysis is carried out using procedures adapted from APHA Method 5310 "Total Organic Carbon (TOC)".

**CR-CR3-DIS-CALC-ED**      Water      Dissolved Trivalent Chromium in Water      CALCULATION

Chromium (III)-Dissolved is calculated as the difference between the dissolved chromium and the dissolved hexavalent chromium (Cr(VI)) results.

**CR-CR3-TOT-CALC-ED**      Water      Total Trivalent Chromium in Water      CALCULATION

Chromium (III)-Total is calculated as the difference between the total chromium and the hexavalent chromium (Cr(VI)) results.

**CR-CR6-ED**      Water      Chromium, Hexavalent (Cr +6)      APHA 3500-Cr C (Ion Chromatography)

This analysis is carried out using procedures adapted from method 3500-Cr C in "Standard Methods for the Examination of Water and Wastewater" published by the American Public Health Association, and with procedures adapted from Method 1636 published by the United States Environmental Protection Agency (EPA). The procedure involves analysis for chromium (VI) by ion chromatography using diphenylcarbazide in a sulphuric acid solution.

Results are based on an un-filtered, field-preserved sample.

**CR6-D-IC-ED**      Water      Chromium, Dissolved Hexavalent (Cr +6)      APHA 3500-Cr C (Ion Chromatography)

This analysis is carried out using procedures adapted from method 3500-Cr C in "Standard Methods for the Examination of Water and Wastewater" published by the American Public Health Association, and with procedures adapted from Method 1636 published by the United States Environmental Protection Agency (EPA). The procedure involves analysis for chromium (VI) by ion chromatography using diphenylcarbazide in a sulphuric acid solution.

Results are based on a field-filtered, field-preserved sample.

**EC-PCT-VA**      Water      Conductivity (Automated)      APHA 2510 Auto. Conduc.

This analysis is carried out using procedures adapted from APHA Method 2510 "Conductivity". Conductivity is determined using a conductivity electrode.

**HARDNESS-CALC-VA**      Water      Hardness      APHA 2340B

Hardness (also known as Total Hardness) is calculated from the sum of Calcium and Magnesium concentrations, expressed in CaCO<sub>3</sub> equivalents. Dissolved Calcium and Magnesium concentrations are preferentially used for the hardness calculation.

**HG-D-CVAA-VA**      Water      Diss. Mercury in Water by CVAAS or CVAFS      APHA 3030B/EPA 1631E (mod)

Water samples are filtered (0.45 um), preserved with hydrochloric acid, then undergo a cold-oxidation using bromine monochloride prior to reduction with stannous chloride, and analyzed by CVAAS or CVAFS.

**HG-T-CVAA-VA**      Water      Total Mercury in Water by CVAAS or CVAFS      EPA 1631E (mod)

Water samples undergo a cold-oxidation using bromine monochloride prior to reduction with stannous chloride, and analyzed by CVAAS or CVAFS.

**MET-D-CCMS-VA**      Water      Dissolved Metals in Water by CRC ICPMS      APHA 3030B/6020A (mod)

Water samples are filtered (0.45 um), preserved with nitric acid, and analyzed by CRC ICPMS.

Method Limitation (re: Sulfur): Sulfide and volatile sulfur species may not be recovered by this method.

**MET-T-CCMS-VA**      Water      Total Metals in Water by CRC ICPMS      EPA 200.2/6020A (mod)

Water samples are digested with nitric and hydrochloric acids, and analyzed by CRC ICPMS.

Method Limitation (re: Sulfur): Sulfide and volatile sulfur species may not be recovered by this method.

**NH3-F-VA**      Water      Ammonia in Water by Fluorescence      APHA 4500 NH3-NITROGEN (AMMONIA)

This analysis is carried out, on sulfuric acid preserved samples, using procedures modified from J. Environ. Monit., 2005, 7, 37 - 42, The Royal Society of Chemistry, "Flow-injection analysis with fluorescence detection for the determination of trace levels of ammonium in seawater", Roslyn J. Waston et al.

**NH3-F-VA**      Water      Ammonia in Water by Fluorescence      J. ENVIRON. MONIT., 2005, 7, 37-42, RSC

This analysis is carried out, on sulfuric acid preserved samples, using procedures modified from J. Environ. Monit., 2005, 7, 37 - 42, The Royal Society of Chemistry, "Flow-injection analysis with fluorescence detection for the determination of trace levels of ammonium in seawater", Roslyn J. Waston et al.

**NO2-L-IC-N-WR**      Water      Nitrite in Water by IC (Low Level)      EPA 300.1 (mod)

Inorganic anions are analyzed by Ion Chromatography with conductivity and/or UV detection.

**NO3-L-IC-N-WR**      Water      Nitrate in Water by IC (Low Level)      EPA 300.1 (mod)

Inorganic anions are analyzed by Ion Chromatography with conductivity and/or UV detection.

**P-T-PRES-COL-VA**      Water      Total P in Water by Colour      APHA 4500-P Phosphorus

## Reference Information

This analysis is carried out using procedures adapted from APHA Method 4500-P "Phosphorus". Total Phosphorus is determined colourimetrically after persulphate digestion of the sample.

**PH-PCT-VA** Water pH by Meter (Automated) APHA 4500-H "pH Value"

This analysis is carried out using procedures adapted from APHA Method 4500-H "pH Value". The pH is determined in the laboratory using a pH electrode

It is recommended that this analysis be conducted in the field.

**PH-PCT-VA** Water pH by Meter (Automated) APHA 4500-H pH Value

This analysis is carried out using procedures adapted from APHA Method 4500-H "pH Value". The pH is determined in the laboratory using a pH electrode

It is recommended that this analysis be conducted in the field.

**SO4-IC-N-WR** Water Sulfate in Water by IC EPA 300.1 (mod)

Inorganic anions are analyzed by Ion Chromatography with conductivity and/or UV detection.

### GLOSSARY OF REPORT TERMS

*Surrogate - A compound that is similar in behaviour to target analyte(s), but that does not occur naturally in environmental samples. For applicable tests, surrogates are added to samples prior to analysis as a check on recovery.*

*mg/kg - milligrams per kilogram based on dry weight of sample.*

*mg/kg ww - milligrams per kilogram based on wet weight of sample.*

*mg/kg lwt - milligrams per kilogram based on lipid-adjusted weight of sample.*

*mg/L - milligrams per litre.*

*< - Less than.*

*D.L. - The reported Detection Limit, also known as the Limit of Reporting (LOR).*

*N/A - Result not available. Refer to qualifier code and definition for explanation.*

*Test results reported relate only to the samples as received by the laboratory.*

*UNLESS OTHERWISE STATED, ALL SAMPLES WERE RECEIVED IN ACCEPTABLE CONDITION.*

*Analytical results in unsigned test reports with the DRAFT watermark are subject to change, pending final QC review.*

## REFERENCE DATA

---

Project / Location: L1833355

PO Number: L1833355

ALS Work Order: 1609786

TEM Water Narrative: Analysis performed on FEI Tecnai TEM with integrated EDXA capabilities. Morphology, EDXA, and SAED measurements used to determine fiber species. Representative EDXA spectra of each asbestos type detected included. Compliance samples must be received and filtered within 48 hours of collection. Collection is performed outside ALS and is the responsibility of the client. Samples disposed after 60 days. TEM grids archived 3 years. Results apply only to portions analyzed.

TEM Water Methods: "EPA 100.2" refers to drinking water samples filtered on 47mm, 0.22µm pore MCE filters. "EPA 100.1" refers to drinking water samples filtered on 47mm, 0.1µm pore Polycarbonate filters. No standard method for asbestos in nonpotable water exists. All TEM waters (potable and nonpotable) analyzed at >10,000x magnification for asbestos fibers >10µm long. Whenever possible, sufficient volume is analyzed to yield an AS of <0.20 MFL based on the detection of 1 confirmed asbestos fiber in the total area analyzed. However, the volume analyzed is dependent upon a filter loading of <25% particulate. Samples containing excessive suspended solids may not reach the recommended AS of <0.20 MFL. In any case, a minimum of 4 and a maximum of 10 openings are analyzed regardless of the AS reached or asbestos concentration detected. ALS will report results directly to state of origin only when;

- a) the Chain of Custody clearly states "drinking water for state compliance",
- b) the appropriate state drinking water form is submitted with the samples,
- c) the state form is completely filled out by the client prior to submittal, and
- d) the address to which the form is to be sent is provided.

NOTES: NA=Not Applicable, ND=None Detected, AS=Analytical Sensitivity, MFL=Millions of Fibers per Liter. <sup>†</sup> Act-Tremolite concentrations include Actinolite as well as the Libby Amphiboles; Tremolite, Winchite, & Richterite.

## NOTES

Sample L1833355-2 E2 may have a negative bias due to the heavy concentration of asbestos fibers too small to be counted by this method as well as sediment particulate. Analysis of this sample was terminated upon completion of the minimum 4 openings analyzed.

Sample L1833355-4 E3 may have a negative bias due to the heavy concentration of sediment particulate. Analysis of this sample was terminated upon completion of the minimum 4 openings were analyzed.

Sample L1833355-5 R3 contained many asbestos fibers that were too small to be counted by this method.

## EDXA SPECTRA

*NOTE: Spurious peaks may originate from low background sample holder, column pole pieces, TEM grids, prep solutions or matrix materials.*

## PHOTOMICROGRAPHS

Collected using Gatan Digital Micrograph.

Re: L1833355

Work Order: **1609786**

Dear Brent,

ALS Environmental received 15 samples on 27-Sep-2016 10:00 AM for the analyses presented in the following report.

The analytical data provided relates directly to the samples received by ALS Environmental and for only the analyses requested.

QC sample results for this data met laboratory specifications. Any exceptions are noted in the Case Narrative, or noted with qualifiers in the report or QC batch information. Should this laboratory report need to be reproduced, it should be reproduced in full unless written approval has been obtained from ALS Laboratory Group. Samples will be disposed in 30 days unless storage arrangements are made.

The total number of pages in this report is 20.

If you have any questions regarding this report, please feel free to contact me.

Sincerely,

**Shawn Smythe**

Electronically approved by: Shawn Smythe

### QUALIFIERS, ACRONYMS, UNITS

| <u>Qualifier</u> | <u>Description</u>                                                        |
|------------------|---------------------------------------------------------------------------|
| *                | Value exceeds Regulatory Limit                                            |
| a                | Not accredited                                                            |
| B                | Analyte detected in the associated Method Blank above the Reporting Limit |
| E                | Value above quantitation range                                            |
| H                | Analyzed outside of Holding Time                                          |
| J                | Analyte detected below quantitation limit                                 |
| n                | Not offered for accreditation                                             |
| ND               | Not Detected at the Reporting Limit                                       |
| O                | Sample amount is > 4 times amount spiked                                  |
| P                | Dual Column results percent difference > 40%                              |
| R                | RPD above laboratory control limit                                        |
| S                | Spike Recovery outside laboratory control limits                          |
| U                | Analyzed but not detected above the MDL                                   |

| <u>Acronym</u> | <u>Description</u>                  |
|----------------|-------------------------------------|
| DUP            | Method Duplicate                    |
| E              | EPA Method                          |
| LCS            | Laboratory Control Sample           |
| LCSD           | Laboratory Control Sample Duplicate |
| MBLK           | Method Blank                        |
| MDL            | Method Detection Limit              |
| MQL            | Method Quantitation Limit           |
| MS             | Matrix Spike                        |
| MSD            | Matrix Spike Duplicate              |
| PDS            | Post Digestion Spike                |
| PQL            | Practical Quantitation Limit        |
| SDL            | Sample Detection Limit              |
| SW             | SW-846 Method                       |

| <u>Units Reported</u> | <u>Description</u> |
|-----------------------|--------------------|
| %                     |                    |
| mg/L                  |                    |

## Qualifiers for Individual Parameters Listed:

| Qualifier | Description                                                                                                                  |
|-----------|------------------------------------------------------------------------------------------------------------------------------|
| HTC       | Hardness was calculated from Total Ca and/or Mg concentrations and may be biased high (dissolved Ca/Mg results unavailable). |
| MB-LOR    | Method Blank exceeds ALS DQO. Limits of Reporting have been adjusted for samples with positive hits below 5x blank level.    |
| MS-B      | Matrix Spike recovery could not be accurately calculated due to high analyte background in sample.                           |

| This analysis is carried out using procedures adapted from APHA Method 2510 "Conductivity". Conductivity is determined using a conductivity electrode.                                                                                                                                                                                                                                                                                              |       |                                          |                                               |

| Hardness (also known as Total Hardness) is calculated from the sum of Calcium and Magnesium concentrations, expressed in CaCO <sub>3</sub> equivalents. Dissolved Calcium and Magnesium concentrations are preferentially used for the hardness calculation.                                                                                                                                                                                        |       |                                          |                                               |

### GLOSSARY OF REPORT TERMS

*Surrogate - A compound that is similar in behaviour to target analyte(s), but that does not occur naturally in environmental samples. For applicable tests, surrogates are added to samples prior to analysis as a check on recovery.*

*mg/kg - milligrams per kilogram based on dry weight of sample.*

*mg/kg ww - milligrams per kilogram based on wet weight of sample.*

*mg/kg lwt - milligrams per kilogram based on lipid-adjusted weight of sample.*

*mg/L - milligrams per litre.*

*< - Less than.*

*D.L. - The reported Detection Limit, also known as the Limit of Reporting (LOR).*

*N/A - Result not available. Refer to qualifier code and definition for explanation.*

*Test results reported relate only to the samples as received by the laboratory.*

*UNLESS OTHERWISE STATED, ALL SAMPLES WERE RECEIVED IN ACCEPTABLE CONDITION.*

*Analytical results in unsigned test reports with the DRAFT watermark are subject to change, pending final QC review.*

Re: L1834129

Work Order: **1609874**

Dear Brent,

ALS Environmental received 12 samples on 29-Sep-2016 for the analyses presented in the following report.

The analytical data provided relates directly to the samples received by ALS Environmental and for only the analyses requested.

QC sample results for this data met laboratory specifications. Any exceptions are noted in the Case Narrative, or noted with qualifiers in the report or QC batch information. Should this laboratory report need to be reproduced, it should be reproduced in full unless written approval has been obtained from ALS Laboratory Group. Samples will be disposed in 30 days unless storage arrangements are made.

The total number of pages in this report is 17.

If you have any questions regarding this report, please feel free to contact me.

Sincerely,

**Shawn Smythe**

---

The analytical data provided relates directly to the samples received by ALS Environmental and for only the analyses requested.

Results relate only to the items tested and are not blank corrected unless indicated.

QC sample results for this data met laboratory specifications. Any exceptions are noted in the Case Narrative, or noted with qualifiers in the report or QC batch information. Should this laboratory report need to be reproduced, it should be reproduced in full unless written approval has been obtained from ALS Environmental. Samples will be disposed in 30 days unless storage arrangements are made.

## REFERENCE DATA

---

Project / Location: L1834129

PO Number: L1834129

ALS Work Order: 1609874

TEM Water Narrative: Analysis performed on FEI Tecnai TEM with integrated EDXA capabilities. Morphology, EDXA, and SAED measurements used to determine fiber species. Representative EDXA spectra of each asbestos type detected included. Compliance samples must be received and filtered within 48 hours of collection. Collection is performed outside ALS and is the responsibility of the client. Samples disposed after 60 days. TEM grids archived 3 years. Results apply only to portions analyzed.

TEM Water Methods: "EPA 100.2" refers to drinking water samples filtered on 47mm, 0.22µm pore MCE filters. "EPA 100.1" refers to drinking water samples filtered on 47mm, 0.1µm pore Polycarbonate filters. No standard method for asbestos in nonpotable water exists. All TEM waters (potable and nonpotable) analyzed at >10,000x magnification for asbestos fibers >10µm long. Whenever possible, sufficient volume is analyzed to yield an AS of <0.20 MFL based on the detection of 1 confirmed asbestos fiber in the total area analyzed. However, the volume analyzed is dependent upon a filter loading of <25% particulate. Samples containing excessive suspended solids may not reach the recommended AS of <0.20 MFL. In any case, a minimum of 4 and a maximum of 10 openings are analyzed regardless of the AS reached or asbestos concentration detected. ALS will report results directly to state of origin only when;

- a) the Chain of Custody clearly states "drinking water for state compliance",
- b) the appropriate state drinking water form is submitted with the samples,
- c) the state form is completely filled out by the client prior to submittal, and
- d) the address to which the form is to be sent is provided.

NOTES: NA=Not Applicable, ND=None Detected, AS=Analytical Sensitivity, MFL=Millions of Fibers per Liter. <sup>†</sup> Act-Tremolite concentrations include Actinolite as well as the Libby Amphiboles; Tremolite, Winchite, & Richterite.

**General Notes:**

E9 appears to be a constricted rock/French drain which now has a lot of vegetation growing through it and on it. No surface water observed. Given the flow down gradient at GWCC-1 there is likely ~~then~~ ~~to~~ gw flow at E9. GW connection between E9 and SL is very likely.

**Site Sketch:**

The sketch shows a vertical line representing a river channel. On the left side, there is a box labeled 'R1' with an arrow pointing to it labeled 'SIGN'. In the center of the channel, there is a box labeled 'SAMPLE' with an arrow pointing to it. Above the 'SAMPLE' box, there is a downward arrow labeled 'FLOW'. To the right of the channel, there is a vertical line representing the bank, with the text 'BANK TO BANK WATER' written next to it.

Sample Site (Con't): R1

Sample Date (Con't): JULY 23 2016

Sample Time (Con't): 14-05

| 11          | 19   | Do the italicized values differ from the last two rows of the table?                                                                                                                                                                                                                                                     | No values should be italicized. Table formatting updated.                                                                                                                                                                                                                                                                                                                                                                                                                           |
| 12          | 30   | Throughout this section, Table 5.1 is referenced, but I think it should be 9.1.                                                                                                                                                                                                                                          | Yes, Table number should be 9.1.                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| 13          | 30   | I appreciate the comparison of exceedances between reference and exposed stations, but unsure of the point that this paragraph is alluding to. More metals present upstream of HL? More metals present in reference sample? I think this just needs an additional sentence or two to clarify the point of the paragraph. | Following a discussion with Emilie Hamm of AAM it was decided that the analytical/interpretive comments originally included in the water quality results section were outside the scope of work of ELR/Hemmera and have been deleted. However, the results section and the Figures in the report do provide sufficient information for a report reader to complete a reasonable interpretation regarding downstream water quality and any likely upstream water quality influences. |

| 14          | 31   | Similar to the above comment, I appreciate the summary, but an intro summary sentence of what was explained above would be helpful to the reader and put the data into context.<br>i.e. – The analytical results for station E1(H) show X exceedances of CCME for dissolved and X for total... | As above.                                                                                                                                                                                                                                                                    |
| 15          | 32   | Same comment as above. [purpose of comparison]                                                                                                                                                                                                                                                 | As above                                                                                                                                                                                                                                                                     |
| 16          | 33   | Same comments as above (summary of E3 exceedances and clearer point to paragraph).                                                                                                                                                                                                             | As above                                                                                                                                                                                                                                                                     |
| 17          | 34   | i.e., exceedances of CCME are not necessarily mine-related?                                                                                                                                                                                                                                    | As above                                                                                                                                                                                                                                                                     |
| 18          | 35   | Same comment as above.                                                                                                                                                                                                                                                                         | As above                                                                                                                                                                                                                                                                     |
| 19          | 36   | Same comments as above (summary of E8 exceedances and clearer point to paragraph).                                                                                                                                                                                                             | As above                                                                                                                                                                                                                                                                     |
| 20          | 41   | If possible, in Appendix 4 please put title on PDF of June Results (i.e., In-situ Monitoring Data – June)                                                                                                                                                                                      | A title has been added as requested.                                                                                                                                                                                                                                         |
| 21          | 55   | Is this the max daily rainfall?                                                                                                                                                                                                                                                                | Sentence about calculated rainfall for August 8 was removed as it was not relevant to the data set.                                                                                                                                                                          |
| 22          | 57   | The title at the top of Figure 11 indicates the temporal range of data in that figure is November 2015 to January 2016 (although the data period at the bottom of the page appears correct).                                                                                                   | Figure 11 has been updated with the correct dates.                                                                                                                                                                                                                           |
| 23          | 58   | I noticed that the total % column on the right added up to 100.1 and did some math checking.                                                                                                                                                                                                   | The additional 0.1 was caused by rounding the numbers to 1 decimal place. One value has (for WNW) has been rounded down from 32.1 to 32.0 as this represents the smallest change that could be made to the originally presented value. All the other values remain the same. |
| 24          | 61   | Was this data point removed from the dataset for mean calculations?<br>(Note: I went back to the section and it is specified that the anomalous datum was removed. May be worth mentioning in the QA/QC section here as well.)                                                                 | A sentence was added to confirm that the anomalous data point was removed before the mean pressure was calculated.                                                                                                                                                           |
| 25          |      | If it's not a huge pain, are you able to rearrange the order of these pages so that the general chemistry and dissolved metals results immediately precede the total metals results for the same station? (i.e., for station R1, general chem and dissolved metals are on                      |                                                                                                                                                                                                                                                                              |

| Comment No. | Page | Comment                                                                                                                                                                                 | Response |
|-------------|------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------|
|             |      | <p>page 1, while the dissolved metals for R1 are presented on page 5 of the table).</p> <p>Otherwise, data for each sampling event was presented well in Table 9.1 (lots of data!).</p> |          |
